/note="Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Plasmid DNA from the normalized library Noricash_GG4 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1257096-1258631, 1469064-1470983, and 147592-1476743). Subtraction by Bento Soares and M. Fatima Bonaldo. " subtraction by Bento Soares and M. Fatima Bonaldo."

A; Title: Mini-collagens in hydra nematocytes.
A; Reference number: A41132; MUID:92064646
A; Accession: D41132
A; Status: preliminary
A; Molecule type: mg/MA
A; Molecule type: mg/MA
A; Residues: 1-72 < KUR>
A; Cross-references: EMBL: X61048; NID:99452; PIDN:CAA43382.1; PID:99453
A; Note: the authors translated the codon GGT for residue 142 as Pro, and TTA for residue; submitted to the EMBL Data Library, July 1991
C; Superfamily: unassigned collagens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             C;Accession: T30760

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                 * NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* This contignous contignous properties of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* A 712 4811 contignous properties of 100 bp. A 712 4812 gap of 100 bp. A 712 4812 gap of 100 bp.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4712 4811: gap of 100 bp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               * NOTE: This record contains 75 individual

* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will
